

PlantHub v1.1 — User Guide

Welcome to PlantHub, your Wi-Fi-enabled ESP32 dashboard for monitoring and caring for your houseplants. It features live sensor readings, AI-powered plant care advice, and an RGB LED that displays your plant's environmental health.

How to Rename a Plant

1. Open your PlantHub dashboard in a web browser.
2. Find the Plant 1 row in the table.
3. Use the Rename text field to enter a new name.
4. Click Update.
5. The new name appears instantly on the dashboard.

How to Ask Dr. Greenthumb for Advice

1. Scroll down to the "Ask Dr. Greenthumb" section.
2. Enter your plant care question (e.g., "Does my plant need water?").
3. Click Send.
4. Dr. Greenthumb will respond with AI-generated advice based on your sensor data.

Tip: Advice now factors in soil moisture, temperature, humidity, and light levels.

LED Color Health Indicators

LED Color	Meaning
■ Orange	Soil moisture is too low (< 15%)
■ Blue	Temperature is too cold (< 60°F)
■ Red	Temperature is too hot (> 85°F)
■ Yellow	Air humidity is low (< 40%)
■ Purple	Light level is low (< 30%)
■ Green	All conditions are healthy

Sensor Data

- Temperature (°F) — every 5 seconds
- Humidity (%) — every 5 seconds
- Soil Moisture (%) — real time
- Light Level (%) — real time

You can view these on the web dashboard along with the last update time. Values update on the web dashboard upon refresh but are monitored at the intervals stated above.

Future Plans

PlantHub will eventually support multiple wireless sensor nodes for multi-plant monitoring via a mobile app — stay tuned for PlantHub v2.0!
